                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   당
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Hepatitis C virus; HCV; transfection; infection; virus gene therapy; vaccine; immunoprotection; hepatotropic;
   The invention relates to Hepatitis C virus (HCV) variants which include polynucleotides comprising non-naturally occurring HCV sequence and HCV
                                                                                                                                              Hepatitis C virus variants having greater transfection efficiency ability to survive subpassage, useful as a vaccine for immunizing to the virus, comprise non-naturally occurring viral sequences.

```
cc variants that have a transfection efficiency and ability to survive subpassage greater than HCV that have wild-type polyprotein coding cc regions. The polypucleotides of the invention are useful for identifying a cell line that is permissive for infection with HCV and detecting testing a compound for anti-viral properties and for inhibiting HCV cc infection. They are also useful for the generation of defined HCV virus stocks to develop in vitro and in vivo assays for virus neutralisation, attachment, penetration and entry, structure/function studies on HCV cc proteins and RNA elements and identification of new antiviral targets, a systematic survey of cell culture systems and conditions to identify creplication in cell culture, production of HCV variants with altered Cc release, production of adaptive HCV variants capable of more efficiency reglication in cell culture, production of HCV variants with altered Cc inhibitor evaluation including those supporting HCV variant replication, cell-free HCV replication assays, production of development of cell-free HCV replication assays, production of cell-free HCV replication assays, production of cefective HCV derivatives for vaccination, engineering of attenuated HCV derivatives for expression of heterologous gene products cor other cell types with appropriate receptors. Vaccine comprising these sequences is useful for inducing immunoprotection to HCV in a primate. The present sequence is Hepatitis C virus (HCV) replibartMan/delta2U's

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                á
This invention describes a novel Hepatitis C virus (HCV) cell culture system comprising human hepatoma cells that contain an integrated HCV-RNA construct (I). (I) contains the HCV-specific RNA segments 5'-NTR (non-translated region), NS (non-structural)3, NS4B, NS5B, NS5B and 3'-NTR, and a selectable (marker) gene (II). The cell cultures, and/or (I), are used to prepare, evaluate and/or test therapeutic and/or diagnostic

The can also be used for preparation of a liver-specific delivery system for gene therapy, and to identify cells permissive for HCV replication. Virus RNA replicates autonomously and with high efficiency in this cellular system, so that variations in replication rates can be measured (for screening antiviral agents) quantitatively or qualitatively, using standard laboratory equipment. Efficient replication of HCV RNA is only achieved when the specified RNA segments are present and when the transfected cells are maintained under permanent selection pressure
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 7989 BP; 1647 A; 2368 C; 2243 G; 1731 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    맑
The invention relates to Hepatitis C virus (HCV) variants which include polymucleotides comprising non-naturally occurring HCV sequence and HCV variants that have a transfection efficiency and ability to survive subpassage greater than HCV that have wild-type polyprotein coding regions. The polymucleotides of the invention are useful for identifying a cell line that is permissive for infection with HCV and detecting replication of HCV in cells of the cell line. They are also useful for instituting a compound for anti-viral properties and for inhibiting HCV infection. They are also useful for the generation of defined HCV virus stocks to develop in viruo and in vivo assays for virus neutralisation, attachment, penetration and entry, structure/function studies on HCV

                 The present invention relates to the use of hepatitis C virus (HCV) assays for identifying a compound that inhibits HCV RNA replication and reporter assays for identifying a compound that modulates the activity of a gene of interest. The assays are useful for identifying a compound that inhibits HCV RNA replication or for identifying a compound that modulates the activity of a gene of interest. The HCV assay is useful for high throughput screening that quantifies both the amount of HCV RNA replication inhibitory activity associated with a test compound and the
                                                                                                                                                                                                                                                     Use of hepatitis C virus assays or reporter assays, e.g. identifying a compound that inhibits hepatitis C virus RNA replication or identifying compound that modulates the activity of a gene of interest.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         useful for treating hepatitis C infection. Assays of the invention have distinct advantages when compared to qRT-PCR or other methods in that assays of the invention may take place in situ in a detergent based crude cell lysate, which requires no further preparation prior to performing the assays. The assays do not also involve numerous manipulations to add or subtract reagents after addition of test compounds and are desirably based on a viral protein which is required by the HCV replicon for replication. The present sequence represents a HCV replicon encoding sequence used in the assay of the invention.

                                                                                                                                                The present invention provides protein and coding sequences from Hepatitis C virus (HCV), comprising all or part of the HCV genome and able to replicate efficiently when transfected into a susceptible cell line without reducing the growth rate of the cell line by more than 10 fold. The sequences are useful for screening for anti-HCV therapeutics, for detecting antibodies to HCV in a biological sample such as blood, serum, plasma, blood cells, lymphocytes, or liver cells from a subject, for deriving authentic HCV components such as replication-complement non-infectious, replication-defective infection-component, and replication-defective non-infectious HCV, in gene therapy or gene vaccination targeted to hepatic tissue for treating an animal infected or susceptible to HCV infection and for studying HCV infection and propagation. The present sequence is a clone of a fragment of the HCV genome designated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel nucleic acid encoding replication competent recombinant hepatitis virus genome useful for screening anti-hepatitis C virus therapeutics ar for vaccine development.
                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Hepatitis C virus

                                                                                                                                                                       The present invention provides protein and coding sequences from Hepatitis C virus (HCV), comprising all or part of the HCV genome and able to replicate efficiently when transfected into a susceptible cell line without reducing the growth rate of the cell line by more than 10 fold. The sequences are useful for screening for anti-HCV therapeutics, for detecting antibodies to HCV in a biological sample such as blood, serum, plasma, blood cells, lymphocytes, or liver cells from a subject, for deriving authentic HCV components such as replication-complement non-infectious, replication-defective infections, replication-defective infectious, replication-defective infections, replication-defective infections gene vaccination targeted to hepatic tissue for treating an animal infected or susceptible to HCV infection and for studying HCV infection and propagation. The present sequence is a clone of a fragment of the HCV genome which encodes the core-neo and NS3 proteinase/helicase proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Hepatitis; HCV; core-neo; NS3 proteinase/helicase; vaccine; diagnosis; virucide; hepatotropic; gene therapy; anti-viral; gene; ds.

The sequences are useful for screening for anti-HCV therapeutics, for detecting antibodies to HCV in a biological sample such as blood, serum, plasma, blood cells, lymphocytes, or liver cells from a subject, for deriving authentic HCV components such as replication-complement non-infectious, replication-defective infection-component, and replication-defective non-infectious HCV, in gene therapy or gene vaccination targeted to hepatic tissue for treating an animal infected or susceptible present sequence is a clone of a fragment of the HCV genome designated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel nucleic acid encoding replication competent recombinant hepatitis C virus genome useful for screening anti-hepatitis C virus therapeutics and

GENERAL INFORMATION:
APPLICANT: Highfield, Peter Edmund
APPLICANT: Rodgers, Brian Colin
APPLICANT: Tedder, Richard Seton
APPLICANT: Barbara, John Anthony James
TITLE OF INVENTION: Viral Agent
NUMBER OF SEQUENCES: 25
CORRESPONDENCE ADDRESS:
ADDRESSEE: Rothwell, Figg, Ernst & Kurz

Sequence 7, Application US/09539601C

Patent No. 6630343

GENERAL INFORMATION:

APPLICANT: Bartenschlager, Ralf FW
TILE OF INVENTION: Hepatitis C Virus Cell Culture Sys
FILE REFERENCE: all sequences
CURRENT APPLICATION NUMBER: US/09/539,601C

CURRENT APPLICATION NUMBER: US/09/539,601C

CURRENT FILING DATE: 2001-08-30

EARLIER FILING DATE: 1999-04-03

NUMBER OF SEQ ID NOS: 51

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 7

LENGTH: 8001:
TYPE: DNA

Sequence 6, Application US/10029907
Patent No. 6706874
GENERAL INFORMATION:
APPLICANT: BOEHRINGER INGELHEIM (CANADA) LTD
TITLE OF INVENTION: SELF REPLICATING RNA MOI
TITLE OF INVENTION: HEPATITIS C VIRUS
FILE REFERENCE: 13/083
CURRENT APPLICATION NUMBER: US/10/029,907
CURRENT FILING DATE: 2001-12-21
PRIOR APPLICATION NUMBER: 60/257,857
PRIOR APPLICATION NUMBER: 60/257,857
PRIOR FILING DATE: 2000-12-22
NUMBER OF SEQ!ID NOS: 25
SUFTWARE: FASTESEQ for Windows Version 4.0
SEQ ID NO 6
LENGTH: 8638
TYPE: DNA
OFCANION: UCV

Sequence 13, Application US/09539601C
Patent No. 6630343
GENERAL INFORMATION:
APPLICANT: Battenschlager, Ralf FW
TITLE OF INVENTION: Hepatitis C Virus Cell Culture
FILE REFERENCE: all sequences
CURRENT APPLICATION UNMBER: US/09/539,601C
CURRENT FILING DATE: 2001-08-30
EARLIER APPLICATION UNMBER: 199 15 178.4 GERMANY
EARLIER FILING DATE: 1999-04-03
NUMBER OF SEQ ID NOS: 51
SOFTWARE: Patentin Ver. 2.1
SEQ ID NO 13
LENGTH: 8649
TYPE: DNA
ORGANISM: Hepatitis C virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S

For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial RCORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila\_bac.htm.
